

## High-performance 4x4 air filters from BMC

BMC Air Filter has announced a new range of high-performance air filters for Australian 4x4 vehicle applications.

The new range includes OE replacement air filters for a wide variety of 4x4 vehicles, including Toyota Hilux and LandCruiser, Nissan Patrol and Navara, Ford Ranger and Courier, Mazda B2500, Mitsubishi Pajero, and the Holden Colorado. Many models have already arrived in Australia, with others due in the next few months.

The BMC air filter is composed of an epoxy-coated alloy mesh to ensure protection from petrol fumes and oxidation due to air humidity. This is covered by a special multilayer cotton filtration material which guarantees containment of all impurities from as small as seven microns, where paper filters generally only offer filtration of particles of 10 microns.

BMC air filters are designed and produced to ensure a higher air flow than OE filters, producing less than half the pressure drop when compared to paper filters. BMC air filters allow more air into the engine while providing better protection.

Because cotton is a natural material which can be reused several times, the filter can be washed with a special detergent then re-oiled, saving the cost of changing the air filter each time the vehicle is serviced. The filter can even be cleaned and regenerated in the outback with the handy aerosol service kit. BMC air filters have a general lifespan equal to that of the vehicle.

BMC air filters, designed and manufactured in Italy, are some of the most successful air filters in many racing categories and events, including Formula 1 (nine championships), the Le Mans 24 Hours (11 victories), V8 Supercars Championship (eight championships) and Bathurst 1000 (eight victories).

BMC air filters were originally developed in association with the Ferrari F1 team, and many of the leading Australian V8 Supercars teams run BMC air filters as they deliver the highest quality, performance and reliability.

## Redarc Smart Start series

One of Australia's most trusted dual-battery isolators has just got even better. The Redarc Smart Start series has recently undergone a design upgrade, with units now featuring an overmoulded control unit for enhanced environmental performance.

The overmould also enhances the appearance of the Smart Start series. The Smart Start units also incorporate an enhanced cable-fastener method, simplifying installation and removing the need for a separate spring washer. These changes are a result of the Redarc commitment to innovation and continuous improvement of its product offerings, just part of the Redarc promise.

The new Smart Start series is made in Australia and incorporates all of the features of previous models, including silver contacts, power-saving technology and fault indication. Units are fully surge protected and covered by a two-year warranty.
